Projects :

- Online Book Shop Management System**
 - Technologies used : **Java (Frontend & Backend), JDBC, MySQL,**
 - Developed a web-based application to manage online book sales and inventory. The system Allows users to browse books, search by category or author, add items to cart, and place orders. Admin functionality includes managing books, stock, users, and orders. The project improves efficiency, reduces manual work, and ensures accurate data management using a centralized database.
- Online Furniture Management System**
 - Technologies used : **PHP, MySQL, HTML, CSS, JavaScript**
 - Developed a web-based Furniture Management System using PHP to manage furniture products, inventory, orders, and customer details. The system allows users to browse furniture items, view product details, and place orders online.
 - Admin can add, update, and delete furniture records, manage stock levels, track customer orders, and generate reports. This project reduces manual work, improves inventory accuracy, and enhances overall business.
